

APPLICATION DATA PRIVACY

on-the-wire masking | user and role-based controls | reveal policy workflow

SECURE YOUR WEB APIs

API CONTROL

Need to apply privacy controls to your legacy applications and online reporting solutions?

LOW IMPACT + LOW COST

No appetite to perform a costly upgrade to your applications or clients?

Changing the application is *not an option*?

COMPLIANCE & MONITORING

Need to meet new privacy regulations and fast approaching compliance *deadlines*?

THE MAMORI SOLUTION

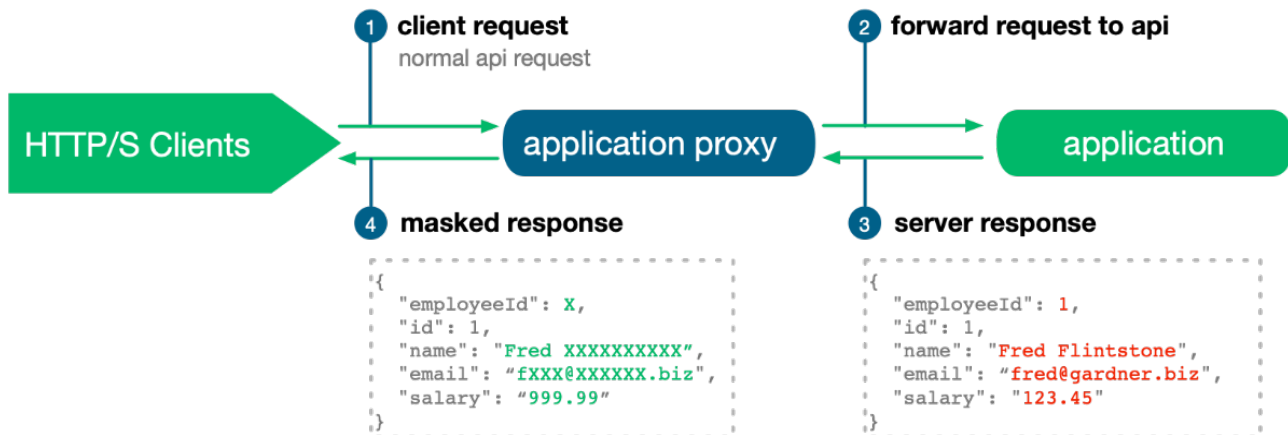

Application Proxy – on-the-wire data privacy controls

With the mamori application inline proxy you can secure your existing web APIs by applying privacy safeguards to your application data on-the-wire - without having to change the application itself:

- Operates over standard web protocols **HTTP, HTTPS, REST** and **SOAP**
- Configurable masking and hashing of structured data such as **JSON, XHTML** and **XML/SOAP** payloads
- Automatic traffic-capture mode for fast provisioning
- Small footprint

When combined with a mamori server:

- Apply user and role-based safeguards
- Use mamori reveal, approval and endorsement workflows

Key Benefits

No change to your end application or client operations. Integrates with your existing load balancers and web servers.

Targeted obfuscation of structured data. Rich library of masking functions

Elevated access and reveal policy workflow

Comprehensive tracking and monitoring dashboards
